

PAST AWARD WINNERS

The RFID Journal Awards were created to highlight the best RFID implementation across multiple industries. RFID journal readers around the world are invited to submit applications that provide details on their deployments, and RFID solution providers are asked to submit information for the Best New Product award.

A team of independent judges evaluate the submission and select the finalists. The finalists in each category are invited to speak at RFID Journal LIVE!, so attendees can learn best practices from these ground-breaking deployments. The winners are announced at the event, and each receives a crystal award.
